☐ Data Gallery

Empower your organization with data and access your insights from one source

Query across all sources

Use natural language, KQL or our API to ask any question your org may have about your team performance, codebase, or to build internal applications.
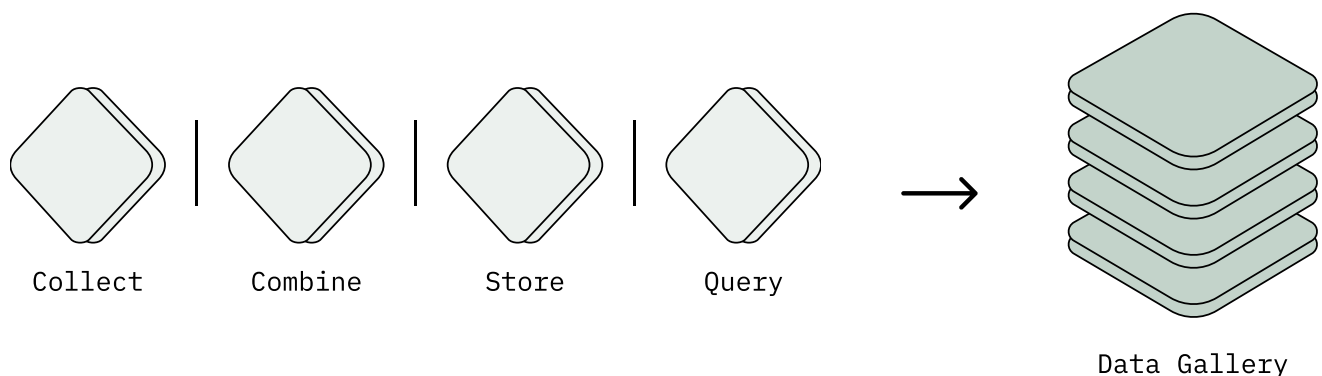

Real-time hosted data

We collect the data that your business needs or creates. It will be actively collected, stored, and combined with other pivotal sources so insights are always at the ready.

No dev work required

We do all of the engineering work required to allow your team to have actionable data.

We are one data source for your entire development organization

We handle the entire data pipeline process. We collect, combine, store, and give your organization the ability to query on any data you need. You can access your data in any way that you would like (Teams, Slack, API, KQL queries, Looker, PowerBI...etc).

Collect | Combine | Store | Query → Data Gallery

Want to get started?

We will collect, combine, and store so you can begin querying your initial data for free! Start by contacting me at davidflowers@data-gallery.com.
